Subject: Re: Public Notice

I have contacted NTUA regarding the Mexican Hat Water Treatment Plant and NTUA stated that the intake at the river has been shut down for a few days due to high turbidity levels in the San Juan River. Water was being hauled from an

adjacent water system to provide water to residents of the Mexican Hat water system. Also, the NTUA-Farmington Rural Regional Water System which includes the communities of Nenahnezad, San Juan, Upper Fruitland, Hogback, Shiprock, Cudeii, and Beclabito receives its drinking water from the City of Farmington, NM. The City of Farmington released this statement, "Farmington's drinking water remains unaffected, and the water supply intake pumps for City of Farmington water supply remain shut down." Therefore, there is no immediate threat to the drinking water systems for all Navajo Nation communities along the San Juan River.
